MODULAR CONCEPT FOR EXTENDERS

A wide range of application installation
 Draco vario chassis allow individual Draco vario series extenders to be combined in standalone or rack mounted configuration. The flexible, modular system allows customized integration of devices to meet specific installation requirements. Chassis are available in sizes to accommodate 2, 4, 6 and 21 individual modules.

Individual and free customization

The Draco vario chassis is the basis for all extender modules of the Draco vario and Draco ultra range, offering complete freedom of choice in the selection of extender boards for every installation configuration. For individual configurations and compliance to power provisioning and heat dissipation the online Draco System Designer dsd.ihse.com is recommended to be used. With DSD not only configuration and plausibility checks are possible, it furthermore adds complete system documentation on top.

Operational reliability and maintenance

Draco vario chassis are available for installing extender modules or for inserting (sliding-in) extender modules. While the chassis for installing modules have advantages in size, the slide-in chassis provide optimal assembly, reconfiguration, expansion and replacement as well as management options.

New chassis with built-in IP management functionality

There are two new chassis supporting an IP management interface via an integrated network. This includes an API interface for actively forcing specific operations of the individual extenders as well as SNMP monitoring of the system and signal health status. Using the IHSE configuration app (TeraTool) the extenders can also be remotely configured and updated.

IHSE offers an online tool for free configuration of your KVM projects. It enables documentation and verification of individual extenders up to complete matrix applications. All KVM switches and extenders are available for selection, including add-on modules, chassis variants and special accessories: dsd.ihse.com
